## Dynamic Risk Assessment

The essential steps that all persons involved in work planning and delivery need to take are as follows;

1. Consider the task and the work site
2. Identify the hazards
3. Identify and assess the risks arising from those hazards
4. Identify the measures necessary to manage and control the risks
5. Check and confirm that the necessary equipment, protective clothing etc are available
6. If the work can be carried out safely, then proceed with the task
7. If in doubt, do not carry out the work; seek advice and assistance

Clerk to be asked annually whether she can identify possible training courses and equipment required to carry out the role safely and effectively.
